PROFILE

Dedicated and detail-oriented software engineering student at COMSATS with a passion for developing innovative solutions. Skilled in Java and Python development, Shopify, and digital marketing. Currently pursuing a Bachelor's degree in Software Engineering, expected to graduate in 2026. Eager to apply my diverse skills and knowledge in a practical work environment.

PROJECTS

BANKING SYSTEM (PYTHON):
Developed a Banking System using Python, focusing on basic account management functionalities. Implemented features for creating accounts, depositing and withdrawing funds, and checking account balances.

COURIER MANAGEMENT SYSTEM (JAVA - GUI BASED):
Created a GUI-based Courier Management System using Java. The system allowed users to track parcels, update delivery statuses, and manage courier-related information efficiently

FLIGHT MANAGEMENT SYSTEM (C++):
Developed a Flight Management System in C++, emphasizing basic flight scheduling and passenger management. Implemented features for adding flights, assigning seats, and displaying flight details

SHOPIFY STORE DESIGNS:
Designed multiple stores on the Shopify platform, focusing on user-friendly interfaces and appealing visual designs. Implemented customization options, product listings, and payment gateways for seamless online shopping experiences.
